

Objective

To create a **sales overview** dashboard displaying:

- Total Sales
- Total Profit
- Total Orders
- Sales by Category
- Sales Trend Over Time

Dataset used

Sample Supermarket Dataset

Tools Used

- PowerBI
- DAX

Key KPIs

- Total Sales
- Total Profit
- Total Orders

Visualisations Included

- KPI Cards
- Sales by Category (bar chart)
- Monthly Sales Trend (line chart)

Skills Demonstrated

- Data cleaning
- Data modelling
- KPI design
- Dashboard development
- Data visualization

- Business insight generation

Dashboard

Business Insights

1. Overall sales exhibit an **upward** trend over time, with periodic fluctuations characterized by occasional peaks and dips.
2. Sales demonstrate a moderate increase during the June to August period, indicating seasonal growth.
3. Sales consistently reach their highest levels in September.
4. **Technology** is the highest-performing product category in the Central, South, and East regions, while **Furniture** generates the highest sales in the West region.
5. The West region contributes the highest overall orders, sales and profit among all regions.
6. The Central region records higher sales and order volume than the South region, yet generates lower profit, indicating comparatively lower profitability per sale.

Conclusion

The dashboard provides management with a concise overview of sales performance, profitability, and regional trends. It enables quick identification of high-performing categories, seasonal sales patterns, and regions requiring attention, supporting data-driven business decisions.
